

CREATE A CLEANER, SAFER INDOOR ENVIRONMENT

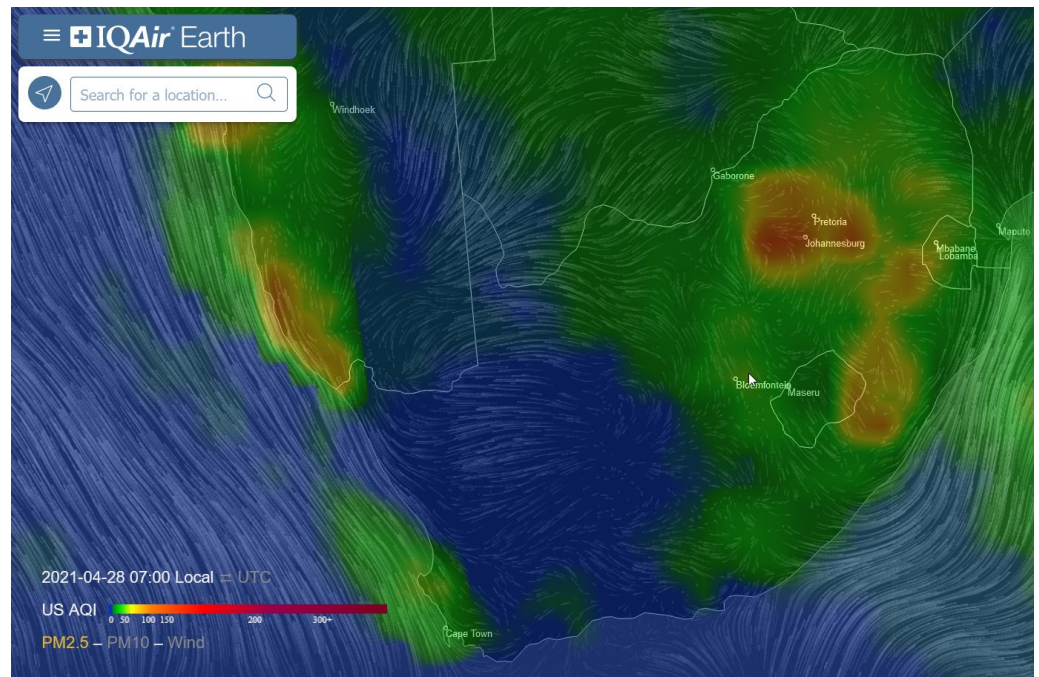

On average, all adults breathe in 20 000 times a day — but very few determine the quality of the air that we breathe and what our nose smells.

Warranty: 24-Months
Guarantee: 12-Months

The quality of the air we breathe has many more far-reaching consequences than most people believe. As the air quality is not always in order, a number of breathing problems such as allergies, asthma, bronchitis and COPD are promoted.

Of course, the JIMCO MAC500 air purifier cannot cure any disease, but it can make life more comfortable for a number of people. By creating a better indoor climate, you can relieve these breathing problems and also reduce the viruses that causes the infection.

South African air quality as depicted by IQAir map as at April 2021.

The JIMCO MAC500 air purifier removes harmful microorganisms, bacteria, viruses and bad odours, creating a healthy indoor climate in homes, businesses and institutions without the use of chemicals or filters. The technology, which has been developed by the Danish company JIMCO A/S, has received the EU's environmental award and is used by many thousands all over the world. The JIMCO MAC500 works with a combination of UV-C light and low levels of ozone (never exceeding 0.05ppm), in a process called photolytic oxidation.

Small and compact enough, the JIMCO MAC500 is completely portable and just needs to be plugged in and switched on, at preferably, a high place in a room. One machine is sufficient for a room up to 60m³ in volume. I.e. 25m² (L-5m x W-5m x H-2.4m).

The JIMCO MAC500 runs 24/7, using a low consumption of electricity, and works by sucking the air into the device and passing it over a specially developed UV-C lamp, whose ultraviolet light sterilises and kills bacterial, viral, yeast, pollen and fungal spores in the air.

At the same time it neutralises airborne odours and other organic substances, such as cigarette smoke and cooking smells.

As with Mother Nature, the JIMCO MAC500 uses the forces of nature to re-create an environmentally friendly, chemical-free process for air purification.

CLEAN AIR

EASIER BREATHING

ENVIRONMENTALLY FRIENDLY
AIR PURIFICATION

NO USE OF CHEMICALS

ELIMINATE MOULD

Effective against airborne Coronavirus

Let's make the places where people gather safe again!

Yes, we have the proven test results from Denmark!

In just 3 hours the air in the room has been cleared to 99.99% virus free and it keeps on purifying the air while people are present.

LET US SHOW YOU HOW EASY IT IS TO CREATE A CORONAVIRUS SAFE ZONE

While the technology used in SAFE ZONES has been fully tested and certified to sanitise the air, following the Department of Health's suggested guidelines are always recommended.

It is only
the imagination that
sets limits on where you
can use the MAC500
